SEEKING PUBLIC INPUT ON TRANSPORTATION PLANNING PROJECTS

BASEHOR, Kansas – Feb. 16, 2022 – The City of Basehor is seeking public input to help guide two future transportation projects in the city: the 155th Street Reconstruction and Modernization and the 158th Street MetroGreen Trail and Pedestrian Improvement projects.

Both projects are part of Basehor Connected, an ongoing community transportation improvement initiative. Basehor Connected will use the progress and momentum created from the 155th Street Reconstruction and Modernization and the 158th Street MetroGreen Trail and Pedestrian Improvement projects to pursue future transportation enhancements throughout the city, all focused on creating a network that connects people and places, efficiently, comfortably, and safely.

All are invited to attend the first public open house, which will take place on Wednesday, Mar. 2 from 5:30-7:30 p.m. at the Basehor-Linwood High School CTE Building (2108 N. 155th St., Basehor, KS 66007). No formal presentation will be made. Members of the project team will be present to share progress to date, gather community feedback, and answer questions.

Additional opportunities for public input will be announced later in the project.

The 155th Street Reconstruction and Modernization project extends north from Wolf Creek Parkway to the entrance of Legacy Senior Apartments. The project corridor is approximately 1.5 miles long and will include a new roundabout and protected pedestrian crossing at the Parallel Road intersection.

The 158th Street MetroGreen Trail and Pedestrian Improvement project begins just north of Garden Parkway and extends to Parallel Road. The project boundary also includes the section of Parallel Road from 159th Street to the west and the 155th Street intersection to the east. The project corridor is approximately one mile long and will focus on pedestrian improvements, including a new trail to 155th Street. This project does not include road improvements to 158th Street but rather focuses on providing pedestrian opportunities for the public.

For more information and resources about the project, visit the project website at www.basehorconnected.com. All are encouraged to subscribe to Basehor Connected project emails updates via the project website.
